

PIM-GUARD-ROOFTOPS

Base Product

PIM-Guard Rooftop Mounts

Passive intermodulation (PIM) presents a constant challenge to wireless network performance—especially given today’s crowded rooftops. That’s why ANDREW created several innovative new mount solutions to reduce PIM between remote radio units (RRUs) and base station antennas (BSAs). **Featuring our popular RT Series rooftop mounts**, single- and dual-ballasted rooftop sector frames, now offered with PIM-optimized face widths to increase antenna-to-antenna spacing.

Product Classification

Product Type Non-penetrating roof frame

Product Brand PIM-guard

Material Specifications

Material Type Hot dip galvanized steel
